NAME

    ppvpat - pattern package reverse compiler

SYNOPSIS

    ppvpat <u>patfilename</u>

DESCRIPTION

    <u>ppvpat</u> outputs the pattern definition by reverse compiling the part of a common pattern package pattern file.

    The argument <patfilename> is the name of the pattern file, including the format dependent ending (ex. <u>temp</u>.<u>p</u>).

FILES

    /usr/include/ppsubs.h common pattern package header file
    pp_kname.h header file inialization pattern keywords array
    pp_kval.h pattern primitives value header file

SEE ALSO

    ppmkpat(1L), pattern(5L)

DIAGNOSTICS

    The diagnostics produced are intended to be self-explanatory.
